

# Costing software 4cost-aces/sustain

Transparent calculation of the  
product carbon footprint

## Your benefits

- Effective reduction of the product carbon footprint already in the development phase
- Targeted optimisation of production processes and locations with regard to their sustainability
- Simplified selection of materials with the lowest possible environmental impact
- More environmentally friendly logistics thanks to quick and easy analyses of carbon footprints and costs for different transport and packaging scenarios
- Increased transparency in documentation and reporting in accordance with regulatory requirements
- Secure management decisions based on sound key figures
- Service guarantee: Comprehensive training programme for working with the software and technical support

**Request a  
no-obligation  
product demo now!**

## Areas of application

- Manufacturing and production
- Transport and logistics
- Packaging
- Disposal

## Top features

- Carbon calculation over the entire product life cycle
- Integrated material database with carbon footprints
- Automatic calculation of carbon emissions based on manufacturing processes and technologies
- AI-supported logistics route planning
- Integration of carbon certificates
- Relevant real-time reports with export
