

Costing software 4cost-aces

Parametric cost estimation for reliable calculations in the early stages

Your benefits

- Significantly faster calculations and well-founded decisions thanks to standardised, comprehensible results and automated reports/cockpits
- Early transparency for development, production and usage costs as well as precise identification of cost drivers and potential savings
- Support for strategic decisions such as design-to-cost, make-or-buy and bid/no-bid through reliable scenario comparisons
- Seamless cost analysis across all project phases thanks to bidirectional data exchange between top-down and bottom-up calculation
- Service guarantee: Comprehensive training programme for working with the software and technical support

Areas of application

- Calculation of development costs
- Calculation of manufacturing costs
- Calculation of software development costs
- Should cost analysis
- Analysis of lifecycle costs
- Total cost of ownership

Top features

- Calculate regardless of technology using 5 parameters
- Integrated and editable reference and material databases
- Simulate and analyse a wide range of cost scenarios with just a few clicks
- Intelligent input wizards and plausibility checks
- Relevant real-time reports with export
